FOR IMMEDIATE RELEASE

Trine Aero Earns AS9100C Certification

Colorado Springs, CO, November 1, 2016- Trine Aero is pleased to announce that they have earned AS9100C Certification for their Colorado Springs, CO, MRO operations.

The AS9100C is a widely adopted quality management system within the aerospace industry. The system helps companies reduce defects from the supply chain, while continually improving quality and boosting customer satisfaction.

"Holding AS9100 certification provides validation and security to Aerospace OEMs and supply chains, because it indicates that the holder is organized and meets deadlines. Using AS9100C validated processes ensures potential vendors are ready to comply with not only industry changes, but customer requirements as well," said Tyler Wilfahrt, Quality Assurance Manager, Trine Aero. "We validated our processes to AS9100C standards over a 4-6 month period of intense auditing. We are looking forward to continuing adherence to AS9100C across the entire organization, and continuing to constantly improve quality assurance and customer care with both existing and new clients," Wilfahrt continued.

Trine Aero is a full-service provider of aviation and aerospace products and services. Operating from Colorado Springs (KCOS) airport, Trine Aero supports a wide array of solutions to a variety of markets, including: Aerospace and Defense, Business Aviation, Engineering and Manufacturing, and Special Mission. Services include major alteration and major repair design, avionics installation and repair, parts fabrication, analysis and FAA-DER engineering approvals.
